

# Diving Dice

www.snappymaths.com

This grid can be used with one child, rolling a dice and practising. Alternatively, it can be played as a multi-player game. To begin with, player A rolls a dice, finds the matching row and solves the first box. The next player then takes a turn. If the box has already been solved, they move to the next box along. The winner is the first player to solve the end box in a row.
